

AI Conversation Evidence — Detroit Storyworks

AI Assistant: ChatGPT

Selected Prompt 1 — Project Planning

“I want to give you all of my coursework, including the reading, so we can sort this out and approach it the most efficient way.”

Why this mattered:

This established that I wanted ChatGPT to help me review the course requirements, prioritize the graded work, and create an efficient development plan.

Selected Prompt 2 — Keeping the Code Appropriate to the Course

“During JavaScript 101, when we were doing the project build, you kind of got a little bit technical. That’s not what we need this time around.”

Why this mattered:

I wanted the project to use JavaScript concepts appropriate for the course instead of unnecessary advanced architecture.

Selected Response Excerpt — API Selection

“For speed, I’d use the Wikipedia/MediaWiki API. The assignment specifically approves it for Detroit landmarks, musicians, athletes, artists, inventors, neighborhoods, and tour-related information. More importantly for us: no API key.”

Why this mattered:

ChatGPT helped me choose a beginner-friendly API that fit the Detroit Storyworks concept and could be used directly from a front-end JavaScript project.

Selected Response Excerpt — JavaScript Feature Planning

“I would make the feature something like ‘Discover a Detroit Story.’ A visitor either types a Detroit-related subject or selects one from a few suggestions. JavaScript does: click → show loading message → fetch() → check response.ok → parse JSON → display title and short description.”

Why this mattered:

This helped define the structure of the main API feature before implementation.

Selected Prompt 3 — Testing

“I did all the suggested tests for the Detroit Storyworks, and it works beautifully. I did the resize test for both Detroit Storyworks and Harbor Lights Bookshop.”

Why this mattered:

After the site was built, I manually tested the API feature, form, filtering, and responsive layout instead of assuming the generated code worked correctly.

Selected Prompt 4 — Reviewing the Deliverable

“Something that I immediately noticed when I’m clicking through Detroit Storyworks, the write-up is substantially less elaborate. Is that intentional? Does this meet my requirements?”

Why this mattered:

I reviewed the generated work against the assignment requirements and asked ChatGPT to verify that the reflection and submission materials matched the rubric.

Selected Prompt 5 — Console/Deployment Review

“I have the GitHub repo link, but deployed site link. What is that?”

Why this mattered:

ChatGPT explained the difference between the source-code repository and the deployed website and helped me understand the final submission requirements.
